

A psychologically-inspired brain model architecture for nano-functional-device- based intelligent systems

Tadashi Shibata

The Department of Electrical Engineering
and Information Technology

The University of Tokyo

Joining the Meeting with Avatars

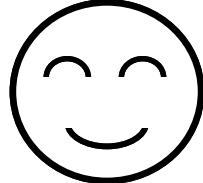

For human-like natural communication:

Perception of gestures, expressions, feeling/mental stateetc.

Human-brain like electronic systems are essential.

Nano Device Era

- Quantum effect manifest itself 
 - Enhanced functionality in miniscule devices
 - Prodigious amounts of elements in a small area
- Stochastic 
 - Variability problem
- Not for Boolean-logic-based systems

Correlation

Correlation is the Key Concept

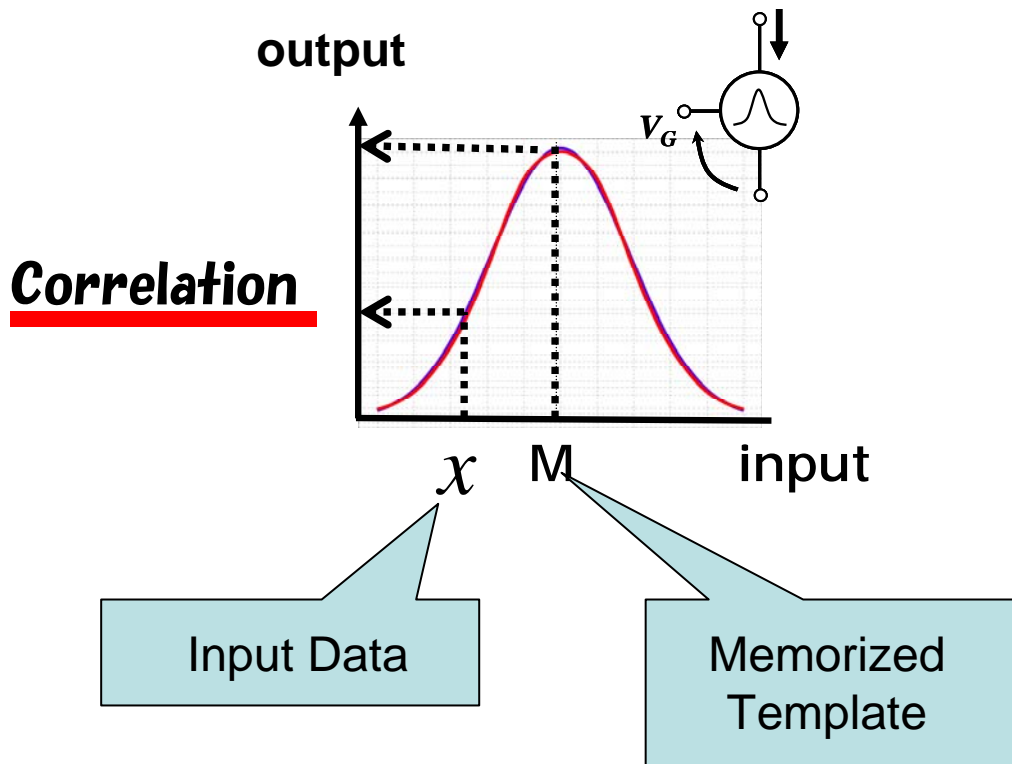

- ***Correlation*** to the Past Experience
 - Associative memory retrieval
 - Recognition & Understanding
- Spatial ***Correlation*** of Local Pixel Intensities
 - Edge detection
 - Image feature representation
- Temporal ***Correlation*** of Moving Images
 - Motion field generation
 - Motion understanding

etc. etc. etc.

Applications Examples

Static Image Perception

- Hand-written pattern and character recognition
- Medical radiograph analysis
- Face detection & identification
- Hand gesture recognition
- Landscape recognition

Moving Image Perception

- Ego-motion detection
- Object tracking
- Gesture perception

Cephalometric Landmark Identification

Location Identification: 100%

Conclusions

- Nano functional devices for brain-mimicking system.
- “Correlation” by resonance characteristics:
 - Associative memory retrieval
 - Edge detection, Motion detection
 - Image recognition, Behavior recognition
- Unconscious mind processing by massively-parallel architectures of nano-functional devices: overall judgment of the situation matters (non rigorous logic).
- Conscious mind processing by traditional CPUs.
